

A child never chooses where they're born — but today, **where they're born decides the education they get.**

EduCam — the daily operating system for the primary classroom.

Investor briefing · 2026

The quality of a child's education is a lottery — of where they're born and which teacher they get.

SUB-SAHARAN AFRICA

89%

Learning poverty

The gap isn't school access — it's the absence of standardized, verified learning, every day.

World Bank · UNESCO · UNICEF — State of Global Learning Poverty, 2022

1

Lessons aren't standardized

Classroom variance

Every teacher builds from scratch. Quality swings class to class, and the best teachers cluster in cities — leaving rural classrooms behind.

2

4 months of silent learning loss

No feedback loop

Between report cards, directors and parents operate blind. A child who slips in October goes unnoticed until grades fall in February.

3

Existing edtech breaks here

Infrastructure gap

Power cuts and costly mobile data make pure-cloud, device-per-child software unusable in ordinary schools.

WHO BEARS THE COST

Directors compete on results, fly blind

Teachers heavy prep, no data

Parents pay 500–700 CAD/yr, locked out

One standard of teaching, in every classroom — and proof it's working.

THE PLATFORM

The daily operating system for the primary classroom.

- **Hardware** battery projector + solar
- **Software** teacher, director & parent apps
- **Content** daily curriculum-aligned lessons

TURNKEY — WE EQUIP EVERY SCHOOL

The same strong lesson, everywhere

Standardized

Every classroom gets a ready-made, visual lesson — quality no longer depends on teacher luck or geography.

Every day becomes visible

Real-time

A daily 5-minute check reveals who understood: directors see school-wide trends; parents get a message home the same evening.

Built to run anywhere

Offline-first

Runs through blackouts with no internet — battery projector, solar power, and download-the-week sync.

For the school: Guarantee quality and win parents' trust.

For the child: The same chance to learn — wherever they are.

We teach the way the brain remembers: by picturing it.

Most edtech digitizes the textbook. We turn each concept into **a picture the child keeps** — one real CM1 science lesson: the states of matter.

1 SEE IT

Each state shown as something real — a stone, water, steam, the sun.

Visual encoding

2 GRASP IT

Its behaviour made visible — keeps its shape, takes the shape, fills the space.

Made concrete

3 PRACTISE IT

Then the class applies it — sorting real things into solid, liquid, gas.

Active recall

Grounded in learning science — dual-coding theory & the multimedia principle.

The craft is the moat. In-house, curriculum-mapped lessons — illustrated and animated in our own style — are expensive to build, hard to copy, and why adoption sticks.

One daily loop turns each school day into learning — and data.

Fully offline, on real working software. The same four-step routine runs every school day — turning each day into data the school can act on.

MATHEMATICS · CLASS 5 · UNIT 3

Understanding simple fractions

Ayuk shares a loaf of bread with Bih. Each must get the **same share**. How many equal parts must we make?

$\frac{1}{2}$
2 equal parts

$\frac{1}{4}$
4 equal parts

Take a strip of paper. Fold it into two perfectly equal parts.

1 TEACH

Teacher

The day's visual lesson on the projector — a short paper check, corrected together in class.

Entering results

Mathematics — Simple fractions — Test out of 10 · 36 pupils

Today's test

Five questions, marked together in class. Entering the whole class takes about thirty seconds.

ENTERED
4 / 36
32 pupils left

TO WATCH
1
below 50% correct

Mark all as got it then correct only the pupils who struggled

Keyboard shortcuts 1 Got it · 10/10 2 Needs work · 4/10 3 Not yet · 0/10

01 · AGBOR Patrick	Got it	Needs work	Not yet	02 · BESONG Mary	Got it	Needs work	Not yet
03 · EBOT John	Got it	Needs work	Not yet	04 · FONGANG Joseph	Got it	Needs work	Not yet
05 · MBUA Christiana	Got it	Needs work	Not yet	06 · NGWESE Alice	Got it	Needs work	Not yet

2 CAPTURE

Teacher

~5 minutes: three taps per pupil — Got it · Needs work · Not yet. Strugglers flagged automatically.

3 SEE & ACT

Director

Teacher and director see it live — who's behind, and which class needs to catch up.

Messages

Messages from the school about Junior

NEW (1)

A lesson to go over this evening New
Mrs. Ngwa · today

EARLIER

Well done on the French test
Mrs. Ngwa · 10 November

Parents' meeting — Saturday the 15th
Head Teacher · 6 November

Second-term supplies
Head Teacher · 2 November

A lesson to go over
Mrs. Ngwa — Mathema
Dear Mr. Ebong,

Junior found sharing int folding with him again t also did very well in Mo

Kind regards.

Open the lesson

4 INFORM

Parent

A message goes home the same evening — the exact lesson to review with the child.

🔄 **Repeats every school day** · syncs automatically when a network is available

Fully offline-first

See it running · 2-min demo

Why now: a paying generation demanding quality, follow-up, and tech.

We size **bottom-up from a real beachhead** — not top-down from a continent. The demand is already here and paying.

FOUR DEMAND TAILWINDS

25%

of primary is private

a paying middle class — and the share is rising

2 incomes

time-poor families

both parents work — they pay the school to follow up

Quality

the new battleground

schools must deliver it — and prove it — to keep parents

96%

mobile reach

every family is reachable on a phone; internet at 42%

WILLINGNESS TO PAY IS ALREADY PROVEN

100 CAD / student / year

is just **15–20%** of the **500–700 CAD** parents already pay in fees.

Funded by a small fee increase — zero new cost to the family.

BOTTOM-UP SIZING • the expansion story, at 100 CAD / student / yr

SOM

20M CAD/yr

≈ 200k pupils × 100 CAD

Beachhead — Douala + Yaoundé, private primary CE1–CM2

+ secondary
higher ARPU ·
~0 CAC

SAM

80M+ CAD/yr

≈ 0.8M pupils × 100 CAD (+ secondary)

Cameroon — private primary nationwide, then secondary

bilingual
proven
→ new
countries

TAM

1B+ CAD

the ceiling

Private K–12 — francophone + anglophone Africa

Cohort LTV: enter a child at CE1 and keep them through secondary — up to **~11 school years** per child, at near-zero repeat acquisition cost.

The economics work from day one — with built-in operating leverage.

The school is the customer: **100 CAD / student / year**, all-inclusive and annual recurring — funded by a small fee increase.

UNIT ECONOMICS — POSITIVE FROM DAY ONE

Per school (CAD)	4 classes	8 classes
– Revenue	18,000	36,000
– Material	3,000	6,000
– Référent, internet, misc	7,000	7,000
Contribution	8,000 44%	23,000 64%

✓ Positive from day 1

✓ Hardware payback < 1 yr

TWO LEVERS OF MARGIN EXPANSION

School size 44% → 64% — more classes share the fixed per-school cost

Référent clustering ~53% / 68%+ — one référent across 2–3 nearby schools

REVENUE ARCHITECTURE — CORE ENGINE + EXPANSION UPSIDE

THE CORE ENGINE — 100% B2B, ANNUAL RECURRING

Today · proven

100 CAD / student / year

All-inclusive — content, dashboards, parent app, equipment, on-site référent, connectivity.

Zero school capex · annual contract lock-in · the whole business today.

EXPANSION UPSIDE · ROADMAP — future monetization unlocked by proprietary per-child data

+ Enrichment marketplace sell relevant courses to parents — matched to the child's own results

to parent

+ Follow-up classes revision via our teacher network for the families the data flags

to parent

Near-zero added CAC · direct to parent. Optionality on top of the core — not the day-one plan.

Services for adoption · software & content for leverage. Permanent on-site référents secure daily retention; reusable software and content drive long-term margin.

Land a school with proof, expand with the cohort, and let results sell the next.

We sell to the **director** — differentiate on quality, give parents the follow-up they demand, at ~15–20% of fees and zero capex.

THE GO-TO-MARKET MOTION

1

Land a lighthouse school

CAC: high

A free proof pilot in one class — the director sees quality, parent engagement, and results first-hand.

Lighthouse pilot · free

2

Expand with the cohort

CAC: near-zero

One class → every primary grade → secondary as the cohort ages up. The subscription grows at near-zero CAC.

Class → school → secondary

3

Results sell the next

CAC: ~0

Happy parents and director networks win neighbouring schools — clustered so one référent serves 2–3 schools.

Density-first · Douala + Yaoundé

🔄 Acquisition cost falls at every stage — a proof-and-reference flywheel; lighthouse schools free, everyone after pays from proof.

ONE ENGINE, TWO TRACKS

TRACK 1 · THE ENGINE

Investor-funded · profitable

Win in the cities

Profitable private schools in Douala + Yaoundé. This is what the raise funds — the commercial core that proves the model.

TRACK 2 · THE MISSION IT UNLOCKS

Ring-fenced funding

Reach the underserved

Proven results + brand bring EduCam to rural schools at reduced cost — funded by **partnerships, foundations & grants, not investor capital.**

The unlock is proof of concept — commercial investors fund the engine; impact funders back the mission.

Today we're alone. Tomorrow we're hard to follow.

A blue field — but not an empty one. The status quo (chalkboards, répétiteurs) leaves parents blind; Western pure-cloud edtech breaks on the ground. No one has solved primary school here.

WHY WE'RE ALONE — THREE BARRIERS KEPT EVERYONE OUT

Power

The grid is unreliable

Battery projector + solar

Internet

Data is patchy and costly.

Offline by design

Capex

Schools won't spend up-front.

Free, full-service delivery

Western pure-cloud edtech fails on all three — which is why it isn't here.

WHY WE'RE HARD TO FOLLOW — THE MOAT

Proprietary full stack

HERO MOAT

Localized curriculum, custom illustrations & animation, and an offline-first codebase — years of craft, built from scratch.

Turnkey zero-capex distribution

Structural moat

All-inclusive hardware + on-site support removes every adoption barrier — and locks schools into an annual ecosystem.

Accumulating learning data

Structural moat

Daily assessment data deepens personalization and builds student histories that are hard to copy.

Incumbents won't come: hyper-local, offline, services-heavy, low-glamour — exactly what global players avoid.

The barriers that blocked everyone are exactly what we solved — **and rebuilding the full stack, the delivery, and the data is the barrier for anyone who follows.**

One foot in North American tech, one in the Cameroonian classroom.

A lean team that has already shipped — with deep pedagogical roots on the ground where it matters.

rollout in Cameroon.

Cameroon • **Teach & On-the-ground**

Already shipped: a working, offline platform with real content and a live demo. **This round adds:** (1) a proprietary content & animation lead — the moat; (2) local operations & référents.

This round deepens the moat and proves the market.

The ask: CAD 100K (illustrative — to confirm). Two priorities + runway; positive unit economics front-load the first cohort, not burn.

USE OF FUNDS · \$20K + \$60K + \$20K = CAD 100K

PRIORITY 1 · THE MOAT

\$20K · 20%

Own the content

A dedicated illustrator / animator / instructional designer building in-context images and animated videos in-house — proprietary, defensible IP.

→ A proprietary, contextualized lesson library.

PRIORITY 2 · THE ENGINE

\$60K · 60%

Capture the market

Pilot + equipment kits + on-site référents + school recruitment across Douala + Yaoundé. Convert lighthouse schools to paying.

→ ~15–20 paying schools · ≈ \$400–600K ARR run-rate.

RUNWAY · 18–24 MONTHS

\$20K · 20%

Operations & buffer

Operating runway and continuous product refinement through the pilot-to-paying transition.

→ Real fundamentals for the next round.

ROADMAP

Late 2026

●
Francophone lighthouse pilot

2027

●
First paying cohort (DLA + Yde) ·
land-and-expand · English pilot

2028

●
Scale the two cities · begin
secondary

Then

●
Foundation-funded rural track ·
new cities & countries

Let's talk. info@academiemansamusa.com *Building the daily operating system for the primary classroom.*

THE VISION

Where you're born should **stop** **deciding what you learn.**

We build a profitable engine in the cities — and use its proof to bring the same standard of learning to every child, wherever they're born.

EduCam by Mansa Musa Academy
