

EduCam

a Mansa Musa Academy solution

The school that knows, every day, what every child has understood.

A digital teaching platform for Cameroon's primary schools — teach from one common standard, measure understanding daily, and give every family a reason to trust you.

Teach better. See clearly. Reassure every family.

A presentation document for **school heads and proprietors**
Designed, deployed and supported by **Mansa Musa Academy**

Between the promise and the proof.

Running a school means carrying a promise every single day: the promise of a child who learns, who progresses and who flourishes in your care. It also means trusting, every morning — trusting your teachers, your methods, and the idea that what happens inside each classroom lives up to that promise.

But between the promise and the proof there is almost always a silence: you hope all is well, you sometimes find out too late, and you struggle to show it to the families, who want certainty.

"A school that knows, every day, what every child has understood — and that can prove it to parents."

This is not a technical brochure. It shows plainly how EduCam closes that silence: what it changes in your teachers' daily work, what it makes visible to the head teacher, and how it turns every parent into an ally rather than a spectator.

EduCam does not replace your teachers. It gives them the means to **teach better**, gives you the means to **see clearly**, and gives parents the means to **trust**.

Three obstacles, in every ambitious school

They do not come from a lack of will or of talent. They come from the absence of a tool able to make visible what actually happens, day after day, in the classrooms.

OBSTACLE 1

Quality depends on the teacher

Two classes of the same level live two different realities. The syllabus is the same on paper; the teaching received is not.

OBSTACLE 2

The head teacher works blind

Is the syllabus covered?
Are the pupils following?
You know it by trust, rarely by proof — and too late.

OBSTACLE 3

Parents are spectators

Between two report cards, a parent knows nothing. A parent kept outside is a parent who doubts, in silence.

FOUR MONTHS LOST

A child starts slipping in mathematics as early as October. Nobody really sees it. By February the marks collapse, the parents worry, and everyone looks for explanations. Four months during which a single early warning would have changed everything.

1 EduCam, in one idea

EduCam turns everyday teaching into information that is clear, reliable and immediately usable. Each day a reference lesson is taught; each child's understanding is measured by a short test; the results reach the head teacher automatically; and the parents concerned are told.

What used to be a hunch — “I think that class is keeping up” — becomes a certainty backed by facts. This is not one more piece of software sitting beside the others: it is the **nervous system of your school**, the thread that links what is taught, what is understood, what is decided and what is told to families. Where an ordinary school runs on impressions, yours will run on proof.

TEACH

Reference content aligned to the official scheme of work, identical for every class.

MEASURE

A short daily test that reveals, pupil by pupil, what was actually understood.

DECIDE

Dashboards that show where to act, which child to support, which class to help.

REASSURE

Parents kept informed day by day, and guided to help their child in the evening.

The screenshot shows the EduCam teacher's workstation interface. On the left is a dark green sidebar with navigation options: Home, Timetable, Syllabus, Results, and Messages (with a red notification badge). The main area is light grey and displays the following information:

- Header:** "Hello Grace" (Wednesday 12 November · Unit 3 · Week 2 · Class 5) and a green badge indicating "Offline ready · 5 days".
- Lesson Section:** A large green box for the "NEXT LESSON" titled "Mathematics — Fractions". It includes lesson objectives, a lesson plan, and a progress bar showing "lesson 3 of 7". Buttons at the bottom allow to "Open the lesson", "Mark as taught", or switch to "Projector mode".
- Rest of the day:** A white box listing the schedule: 10:00 French (Grammar), 11:00 Science (States of matter), 13:20 English (Reading), and 14:05 PE (Team games).
- Summary Cards:** Four white cards at the bottom provide a quick overview: "LESSONS TODAY" (7, next at 09:00), "CLASS AVERAGE" (13.4/20 across 36 pupils), "PUPILS TO WATCH" (4 below 10/20), and "OFFLINE" (12, 5 days left).

The teacher's workstation. The next lesson, its objectives, the lesson plan and the offline status — everything needed before walking into class, on a single screen.

Teach. Measure. Decide. Reassure the parents. **Every day.**

Nothing beats a concrete example. Let us follow an ordinary day in a Class 5.

8:30 — THE LESSON

The teacher projects the day's lesson onto the board. The lesson is structured, illustrated and punctuated by short Cameroonian stories in which two familiar characters, Ayuk and Bih, pull the class into the subject. The children do not endure the lesson: they live it. Even with no connection that morning, everything works — the week was downloaded in advance.

9:15 — THE TEST

At the end of the lesson the teacher hands out a short paper quiz. Five questions, a few minutes. It is marked together, in class: that is already a moment of learning. Then the teacher enters the results — about thirty seconds for the whole class. Three children scored below half: the platform flags them at once.

14:00 — THE HEAD TEACHER

In her office, the head teacher opens her dashboard. Without having had to ask anyone, she sees that the lesson was indeed taught in all three Class 5 streams, that average understanding is good, and that one child has been slipping quietly for three days. She will speak to the teacher tomorrow — not in February.

19:30 — AT HOME

A parent receives a WhatsApp message: his son has a lesson to go over this evening. In two taps he opens exactly the right lesson and works through it with his child. He no longer feels powerless. He feels like a partner.

THE LOOP, IN SIX STEPS

1

The lesson
projected

2

The paper test

3

4

Entered, 30
seconds

5

The
dashboard

6

The parent
told

In a single day, information that once took a whole term to travel upward — **when it travelled at all** — is already in your hands, put to use, and shared with families.

3 In class: why a projector, and not a screen

The question comes up on every visit, and it is a fair one: why not simply mount a large television on the wall? We settled on the **portable video projector**, for four reasons that come straight from the classroom.

Image size

A projector throws an image two to three metres across. A television within a school's budget rarely exceeds 110 cm — unreadable from the back of a class of forty. The child on the last row must see as well as the child on the first.

Independence from the mains

Our projector carries its own battery and draws a fraction of what a large screen needs. The lesson carries on through a power cut; a television goes off with the mains.

Mobility

A projector moves from one class to the next and follows the teacher. A wall screen is fixed: you must buy one per room, mount it and secure it.

Security

At the end of the day the projector goes back to the head teacher's office. A wall screen stays exposed all night.

Understanding simple fractions

Ayuk shares a loaf of bread with Bih. Each must get the **same share**. How many equal parts must we make?

1/2

2 equal parts

1/4

4 equal parts

Take a strip of paper. Fold it into two perfectly equal parts.

Projector mode. The lesson shown large, readable from the back of the class and driven by the teacher. The content becomes a shared performance — and the children's attention follows.

And the teaching benefit goes beyond comfort: the teacher no longer writes the lesson on the board while the class waits. He teaches, he watches his pupils, he gets them taking part.

4 No electricity, no internet: the lesson still happens

This is the first question any serious school head asks. A digital solution that stops at the first power cut is worth nothing in a Cameroonian school. We did not go around the problem: we dealt with it, hardware included.

Power: three levels of independence

The first two levels cover an ordinary day: the laptop and the projector hold the class on their own batteries, and spare batteries take over without interrupting the session. The third covers long outages: a power station recharged by solar panels feeds the laptop and the projector, and refills itself during the hours of sunlight, without depending on the grid.

A power cut does not interrupt a lesson. It is not even noticed.

Network: the week is downloaded in advance

An internet connection is not a requirement in the classroom. The teacher downloads the week's lessons whenever the network is available; they then stay readable with no connection at all, for five days. As soon as the network returns, syncing happens on its own: lessons marked as taught and results entered offline travel up automatically.

Preparing the week. The teacher sees how much there is to download before starting, and how many days of offline access are left.

5 For the head teacher: taking back full control

This is where EduCam changes your work most deeply. Today you must largely trust, and wait for the examinations to know. Tomorrow you have a **live view**: what has been taught against the annual plan, the level of understanding class by class and pupil by pupil, and the list of children starting to fall behind — while there is still time to act.

The control desk. The screen says first what needs doing — here, a class three weeks behind — and only then shows the numbers.

WITHOUT EDUCAM	WITH EDUCAM
You discover a pupil's difficulties at the end-of-term examination.	You see them appear within days, and you act at once.
You assume the syllabus is being covered.	You see exactly where each class stands against the plan.
You judge a teacher's commitment on general impression.	You rely on facts: lessons opened, results entered.
Follow-up meetings rest on feelings.	They rest on clear, shared data.

The activity log goes further still: it tells you who really uses the platform, and how. A teacher who marked a lesson “taught” without ever having opened it is flagged discreetly. **Not to police, but to support**: you know where to put your attention and which teacher to help. You move from firefighting to piloting.

6 For teachers: a job made easier, and valued

EduCam lightens your teachers' load and, at the same time, raises the level of every lesson. The lessons come ready to use: rich, illustrated, aligned to the scheme of work, and designed to be projected in front of the class as easily as revisited at home. Preparation time melts away and the common standard rises — a real support, above all for the youngest teachers, who lean on solid content instead of building everything alone.

A YOUNG TEACHER

Early in his career, he dreaded his science lessons. With EduCam he projects a lesson that is clear, lively and structured. The class follows, takes part, passes the day's test. In front of his pupils as in front of the head teacher, he looks — and feels — fully professional.

05 · MBUA Christiana	Got it	Needs work	Not yet
06 · NGWESE Alice	Got it	Needs work	Not yet

Mrs. Ngwa
Class 5A

Thirty seconds for the whole class. Three buttons per pupil, keyboard shortcuts, and “mark all as got it” so that only the exceptions need correcting. Assessment stops being a chore.

For pupils: nobody slips through unnoticed

Every child gets teaching that is structured and regular, rooted in Cameroonian stories and examples that make them want to learn. Above all, the “lessons to go over” target exactly the ideas the pupil stumbled on. Instead of a vague “he must work harder”, the parent and the teacher know precisely what to go back to.

A better-equipped teacher makes a class that keeps up. **That is where the level of your school is decided.**

7 For families: from spectators to partners

This may be the most powerful benefit of all, because it is the one families feel directly — and the one that feeds your school's reputation. Each parent receives an **individual code** giving access to their own child, and to that child alone: the average, the latest tests, and the lessons to go over at home. And thanks to WhatsApp, a parent gets a signal as soon as a difficulty appears, without having to open the app every day.

One child's progress, on one page. On the left, how the child is doing, with a piece of practical advice written for a parent who may not have gone far in school. On the right, what to go over this evening.

WITHOUT EDUCAM	WITH EDUCAM
The parent discovers the results on the report card, once a term.	He follows progress day by day.
He does not know how to help at home.	He opens exactly the right lesson, guided step by step.
He trusts... or doubts, in silence.	He has proof, and becomes the school's ambassador.

"Take a strip of paper. Ask your child to cut it into two equal parts, then into four." — the practical advice sent home.

The same view, on the parent's phone.

For the school: your image, your reputation, your difference

With EduCam, every one of your classes teaches from the same reference standard. Quality no longer depends on the luck of being in one class rather than another: it becomes a feature of the whole school. That consistency is not only a teaching improvement — it is a **powerful selling point**. You can now state, and above all prove, that your teaching is standardised, tracked and measured.

Picture an admission visit: instead of promising in words that “your child will be properly followed”, you show, on a screen, the very space in which the parent will see their own child’s progress every day.

What your competitors say, you prove.

And the circle is a virtuous one: reassured parents re-enrol, recommend your school, and accept more readily the level of fees that exceptional support justifies.

Content aligned to the official programme

The syllabus is fully structured along the official annual scheme of work: monthly thematic units, one lesson per teaching week, and integration weeks for assessment. The **ten subjects of the official programme** are structured within it — English Language, French, Mathematics, Science and Technology, Social Studies, ICT, National Languages and Cultures, Arts, Physical Education and Vocational Studies. Every lesson ends with a **Summary to copy** into the exercise book, exactly as Cameroonian schools expect.

The screenshot shows the EduCam app interface. On the left is a dark green sidebar with navigation options: Home, Timetable, Syllabus, Results, and Messages. The main content area is titled 'Mathematics · Fractions' and 'Understand and use simple fractions'. It includes a '1. Discovery activity' with a 15-minute timer and a 'Summary to copy' section highlighted in green. The summary text states: 'A fraction is a share in equal parts. 1/2 is read "a half". 1/4 is read "a quarter". Two quarters make a half: $\frac{1}{4} + \frac{1}{4} = \frac{1}{2}$.' Below the summary are buttons for 'Mark this lesson as taught', 'Projector mode', and 'Preparation quiz · 80%'. On the right, a 'Contents' sidebar lists the lesson components: 1. Discovery activity, 2. What to remember, 3. Practice exercises, and 4. Summary to copy. At the bottom, the user's name 'Mrs. Ngwa' and class 'Class 5A' are displayed.

A lesson, from discovery to the Summary. The Summary to copy is highlighted, ready for the exercise book.

9 Our support, and what comes next

Adopting EduCam must cost your team nothing in peace of mind. Deployment does not rest on the school's shoulders: we take it on. We create your school in the platform, enrol the pupils and issue the parent codes, train your teachers and your management, and walk beside you through the start-up. We then stay available all year for support.

Privacy and consent

Children's data is protected: access by family consent, strict separation between schools, and no data exposed on the open internet. Each school sees only its own pupils. The trust parents place in you, we protect as you do.

A platform that keeps moving

Choosing EduCam is not buying a frozen product. The following developments will be added to what your school already uses, with no new installation.

- **Intelligent assistant** — remediation exercises adapted to each child, and written summaries of the dashboards.
- **Report cards and reports** — progress reports and documents for the authorities, generated automatically from the data already collected.
- **Extension to every primary level** — the content widening progressively, class after class.

Communication with families, built in

Messaging is designed as a real inbox: every message has a subject and a body, new ones stand apart from the history, and a clear record of every exchange is kept. The school sends a targeted message to one parent — a difficulty to go over, congratulations, a direct link to a lesson.

You are not only adopting a platform: you gain a **partner invested in your school's success.**

PICTURE YOUR SCHOOL A YEAR FROM NOW

A school that knows, that steers and that reassures.

Your teachers walk into class with lessons ready and a daily test that has become second nature. Every morning you open a dashboard that tells you exactly where each class stands and which child to support — and you step in before the difficulties settle.

Parents speak of your school as “the one that really follows the children”. Re-enrolment goes more smoothly, new families arrive by word of mouth, and your school stands clearly apart from the competition.

**The question is not whether your school can afford it,
but whether it can afford to go without.**
